Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                         PATHWAY: Amino-acid biosynthesis; L-isoleucine biosynthesis; L-
                                                                                                 from pyruvare: step 2.
SUBCELLULAR LOCATION: Mitochondrial.
SIMILARITY: Belongs to the ketol-acid reductoisomerase family.
 Amino-acid biosynthesis; Branched-chain amino acid biosynthesis; Magnesium; Mitochondrion; NADP; Oxidoreductase; Transit peptide.
TRANSIT 1 26 Mitochondrion (Potential).
CHAIN 20 99 NADP (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2;
